

DRAGON TORCH

The Dragon is a pyrotechnic torch specifically designed to destroy (through practical low order technique) thin skinned steel (6-8mm) and plastic cased ordnance. This stand-off solution offers an effective method of destroying ordnance and specifically those that are classed as “no touch” items. The Dragon is ‘pre-loaded’ and can be imported into regions where access to explosives and accessories are denied. Dragon generates a focused flame with a temperature of more than 2000°C.

OPERATION/ INITIATION

The Dragon is of two-part design, (1) the preloaded torch and (2) the TIS starter, which electrically initiated by use of a standard firing cable and exploder. The TIS starter is inserted into the end of the Dragon at the jet end. The system has been rigorously tested on live ordnance natures by industry professionals.

TRANSPORT/ ACCESS

For transport the UN DG classification for the Dragon is 1.4G with a CE mark – which enables the Dragon to be exported and imported without restriction.

STAND/ SUPPORTS

A stand is provided with Dragon batches (1 x per 25) so that the right angle of attack and standoff can be achieved for optimum results.

FEATURES

- Stand-off solution
- Pre-Loaded
- Uses the TIS starter
- 20 second burn
- Over 2000°C flame

“A pre-loaded, accessible, effective one shot system – tested and evaluated by EOD operators in testing conditions, with optimum results achieved”

MAT Kosovo's EOD & ERW Training Establishment.
